CHALLENGES

- 天氣預報不準確

Weather Forecast Not Accurate Enough

- 設備廠商希望得到實際天氣情況

Manufactory Needs REAL End-User Weather Data of their Devices

- 路線規劃時只能根據現在擁堵情況而不是出發后是否可能擁堵

Map Apps Make Directions Based on Traffic Situation NOW BUT NOT The Time You DEPART.

現有的天氣數據提供了過少的數據

Weather Information Nowadays Provides Too Little Information

更多的氣象傳感器

More Weather Sensors

或者

OR

我們已經有了傳感器

We Have Had Those Sensors

全台北 770 个

車輛偵測器的數據是否和天氣有所關聯

Is There Any Relationship Between The Data of 770 Vehicle
Sensors in Taipei and The Weather Situation?

ASSUMPTIONS

下雨時車輛行駛更慢

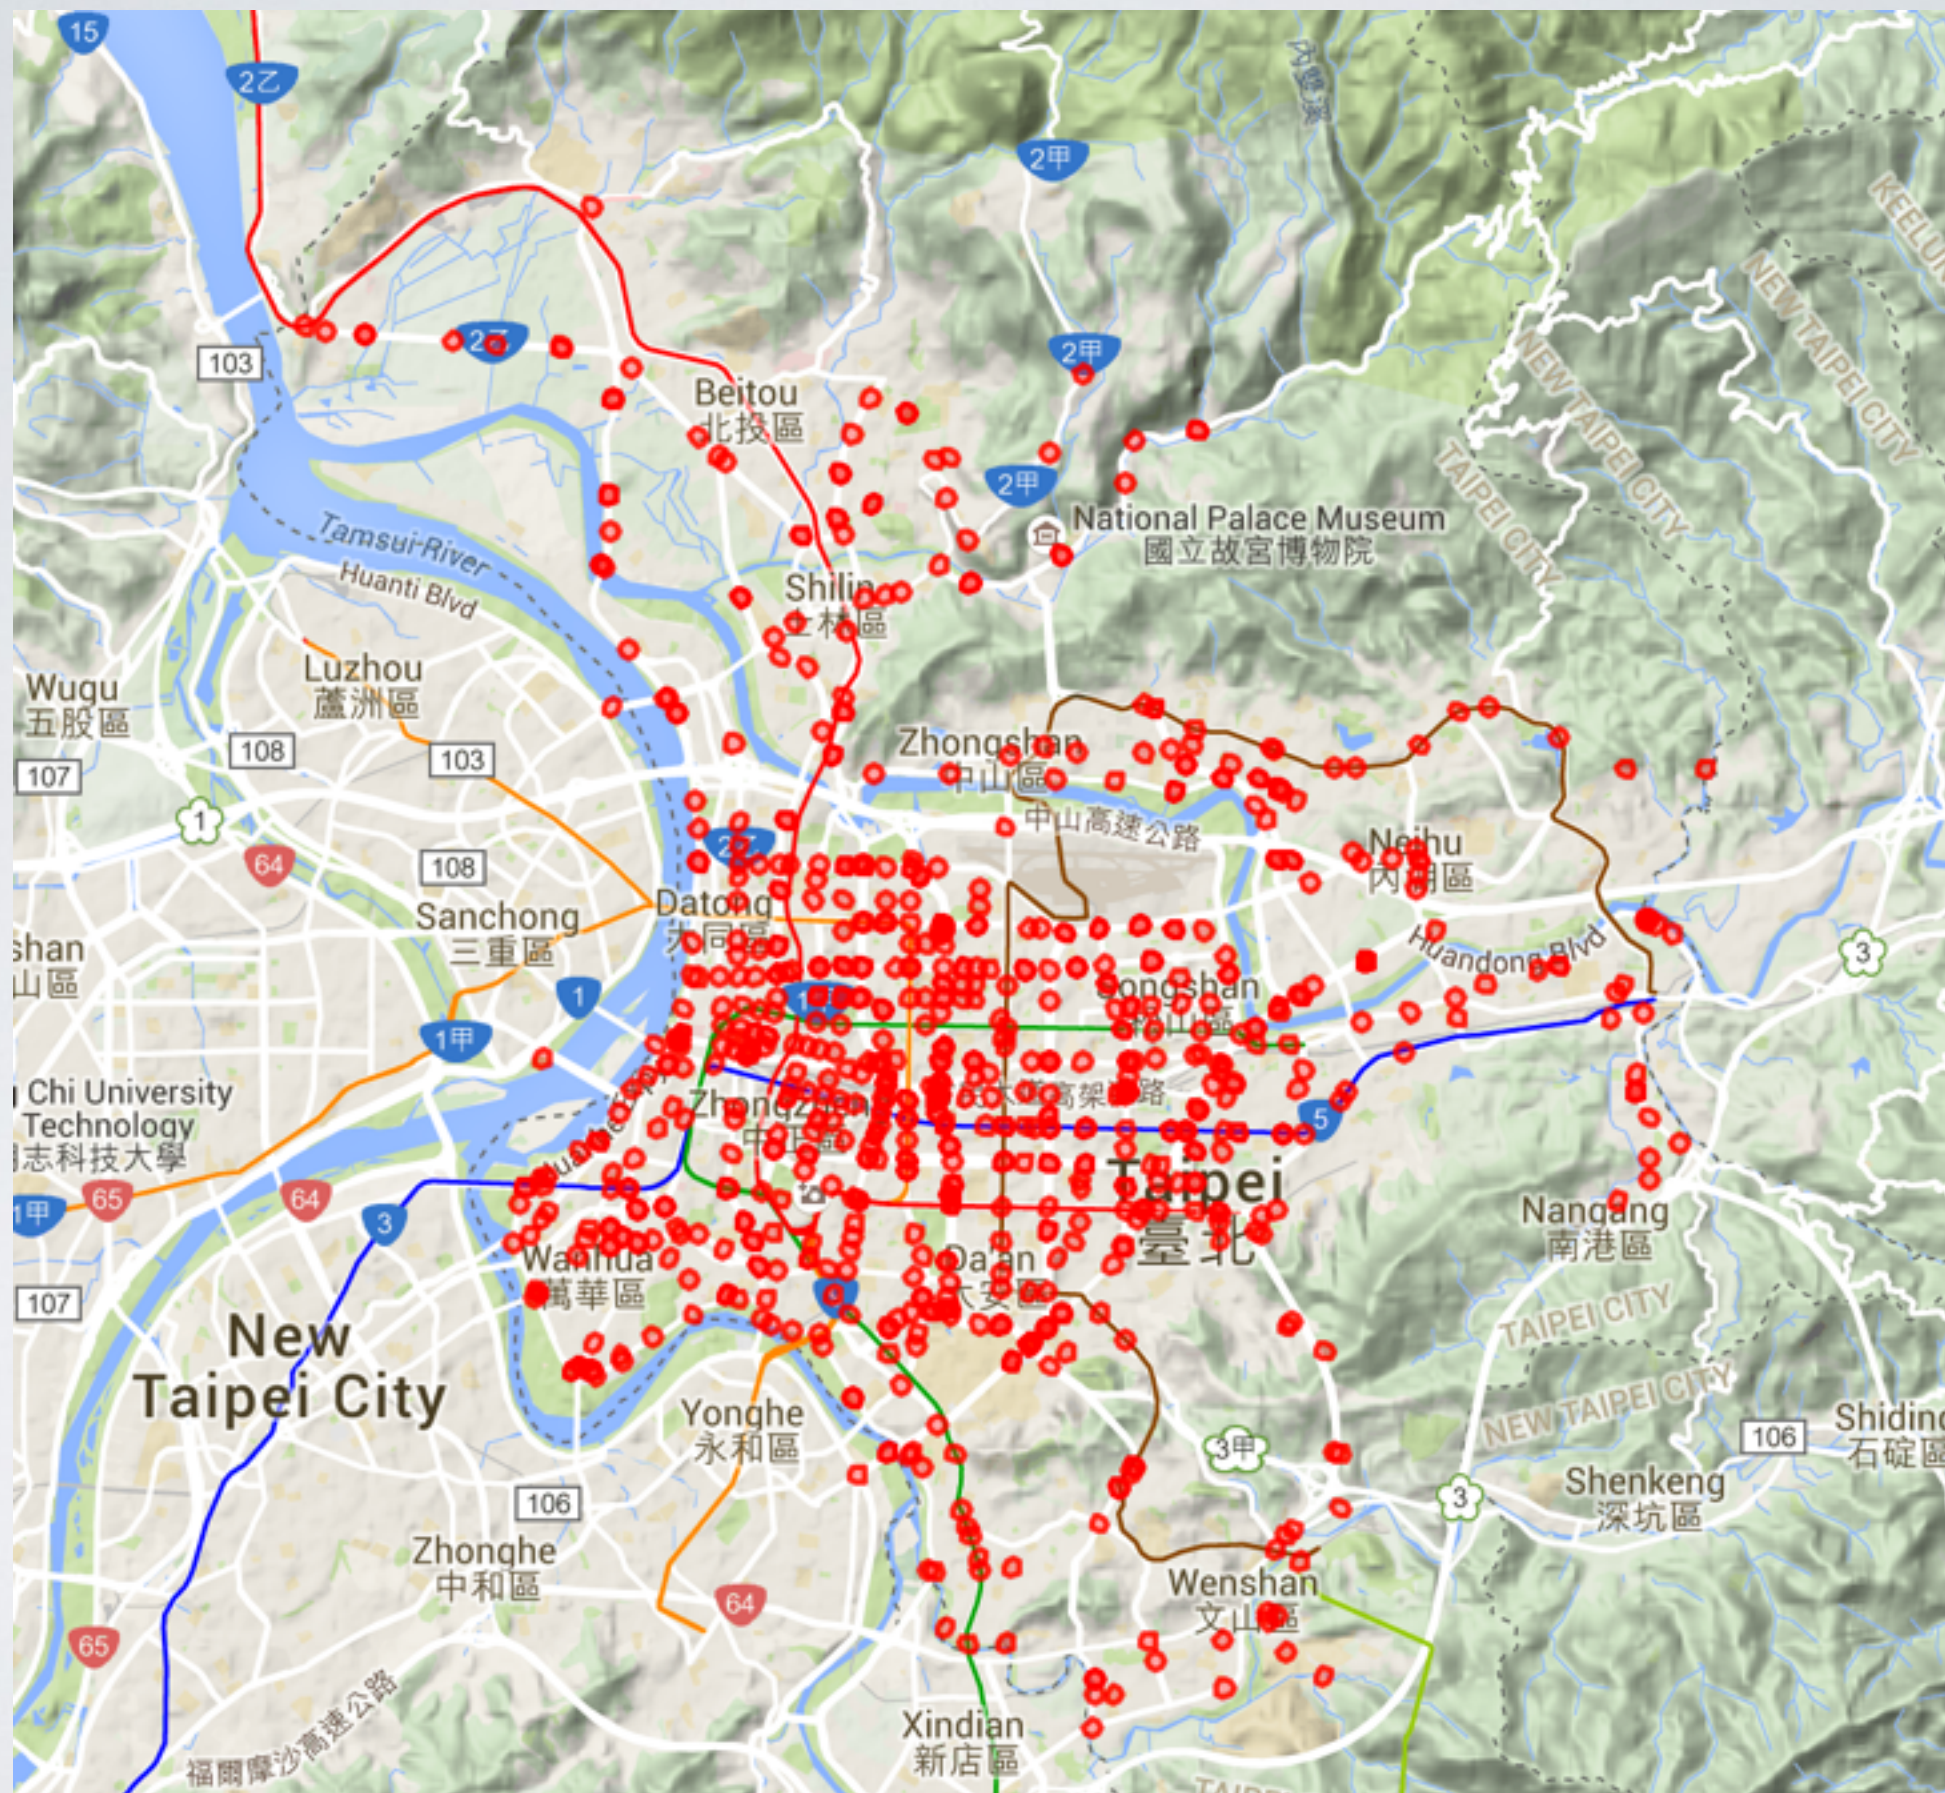

Cars Run Slower When it Rains

下雨時道路更容易堵車

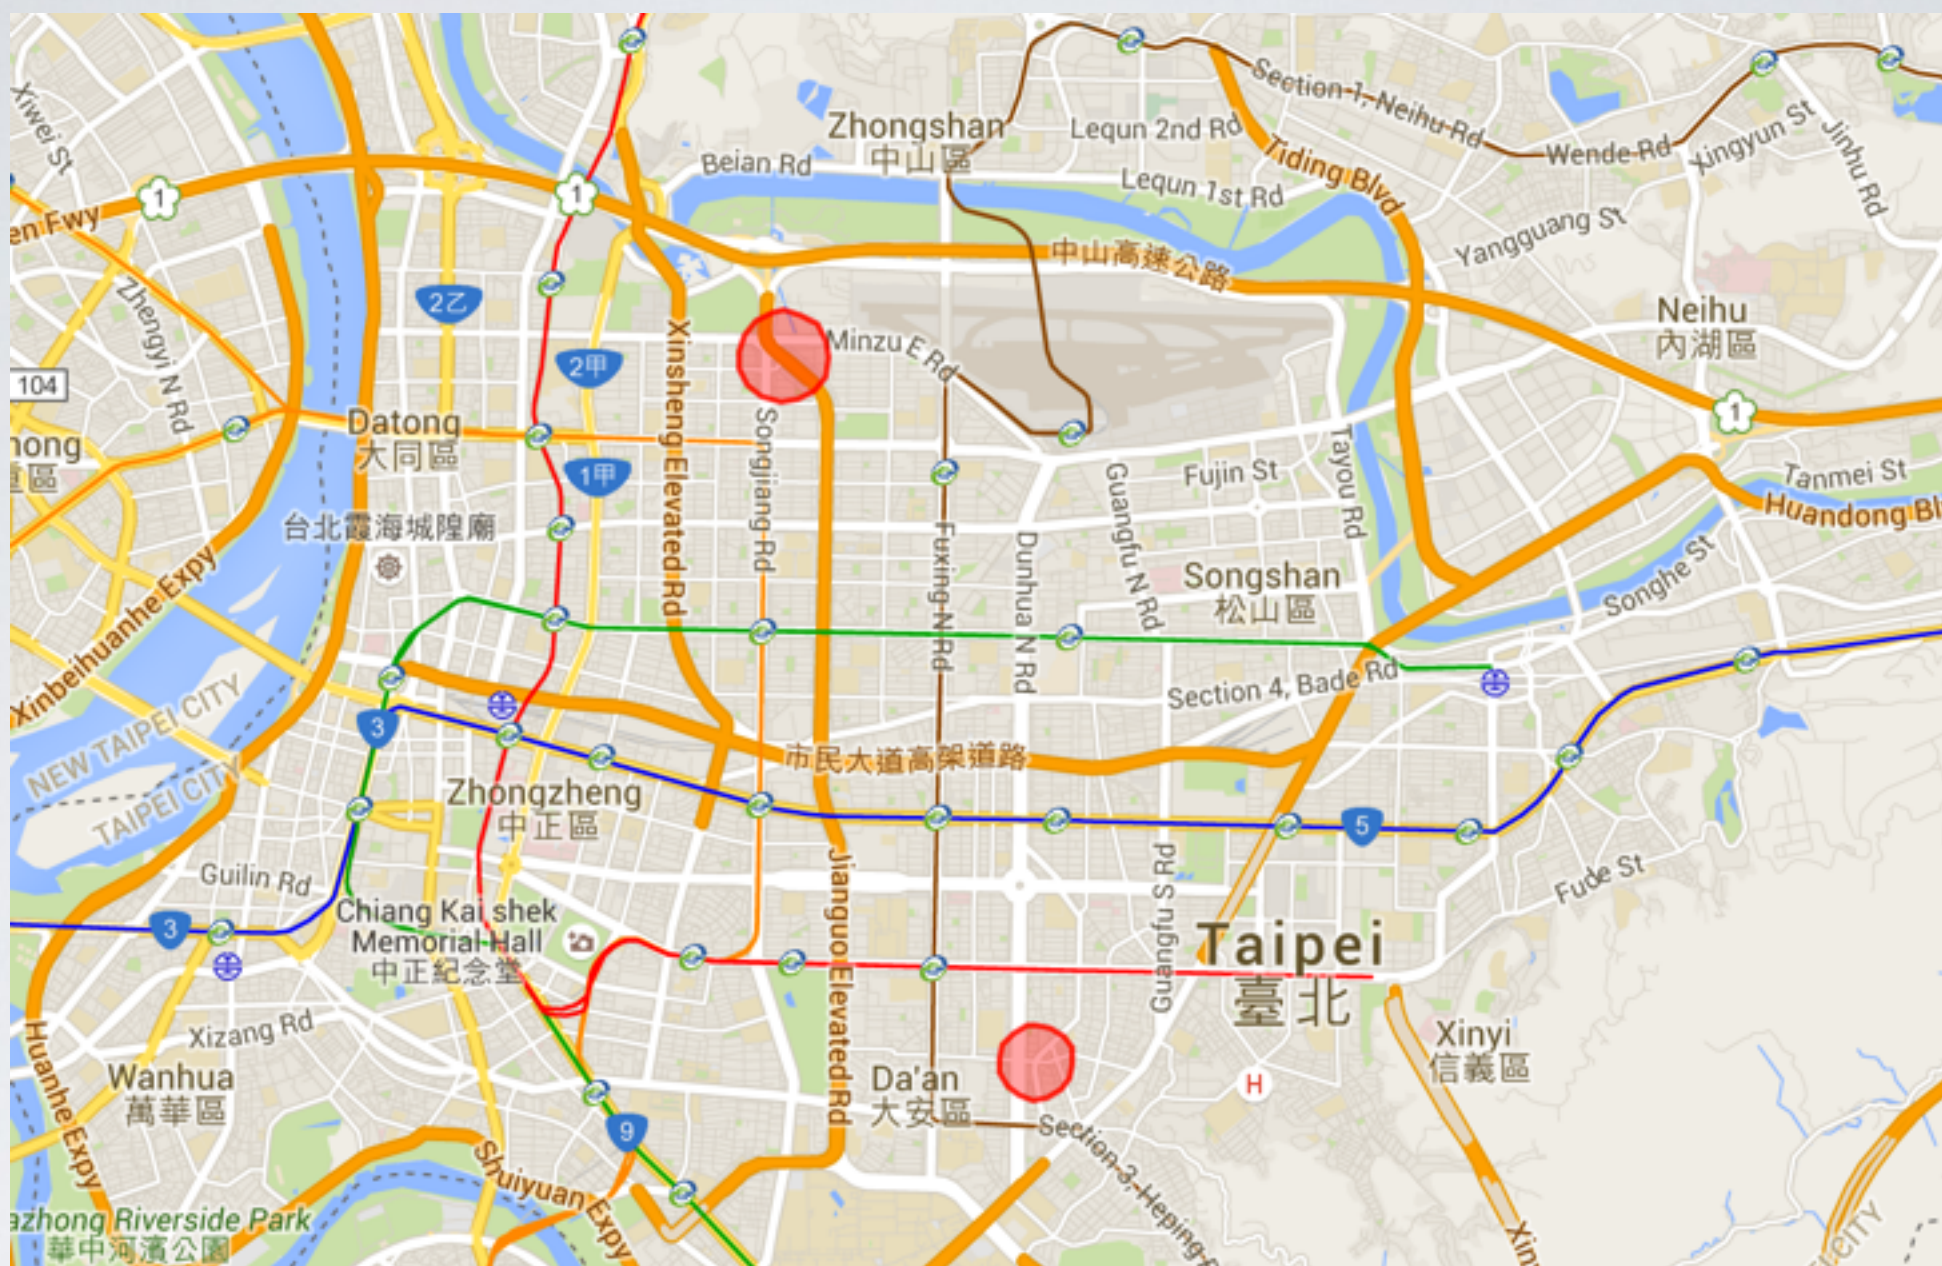

More Likely to Have A Traffic Jam When it Rains

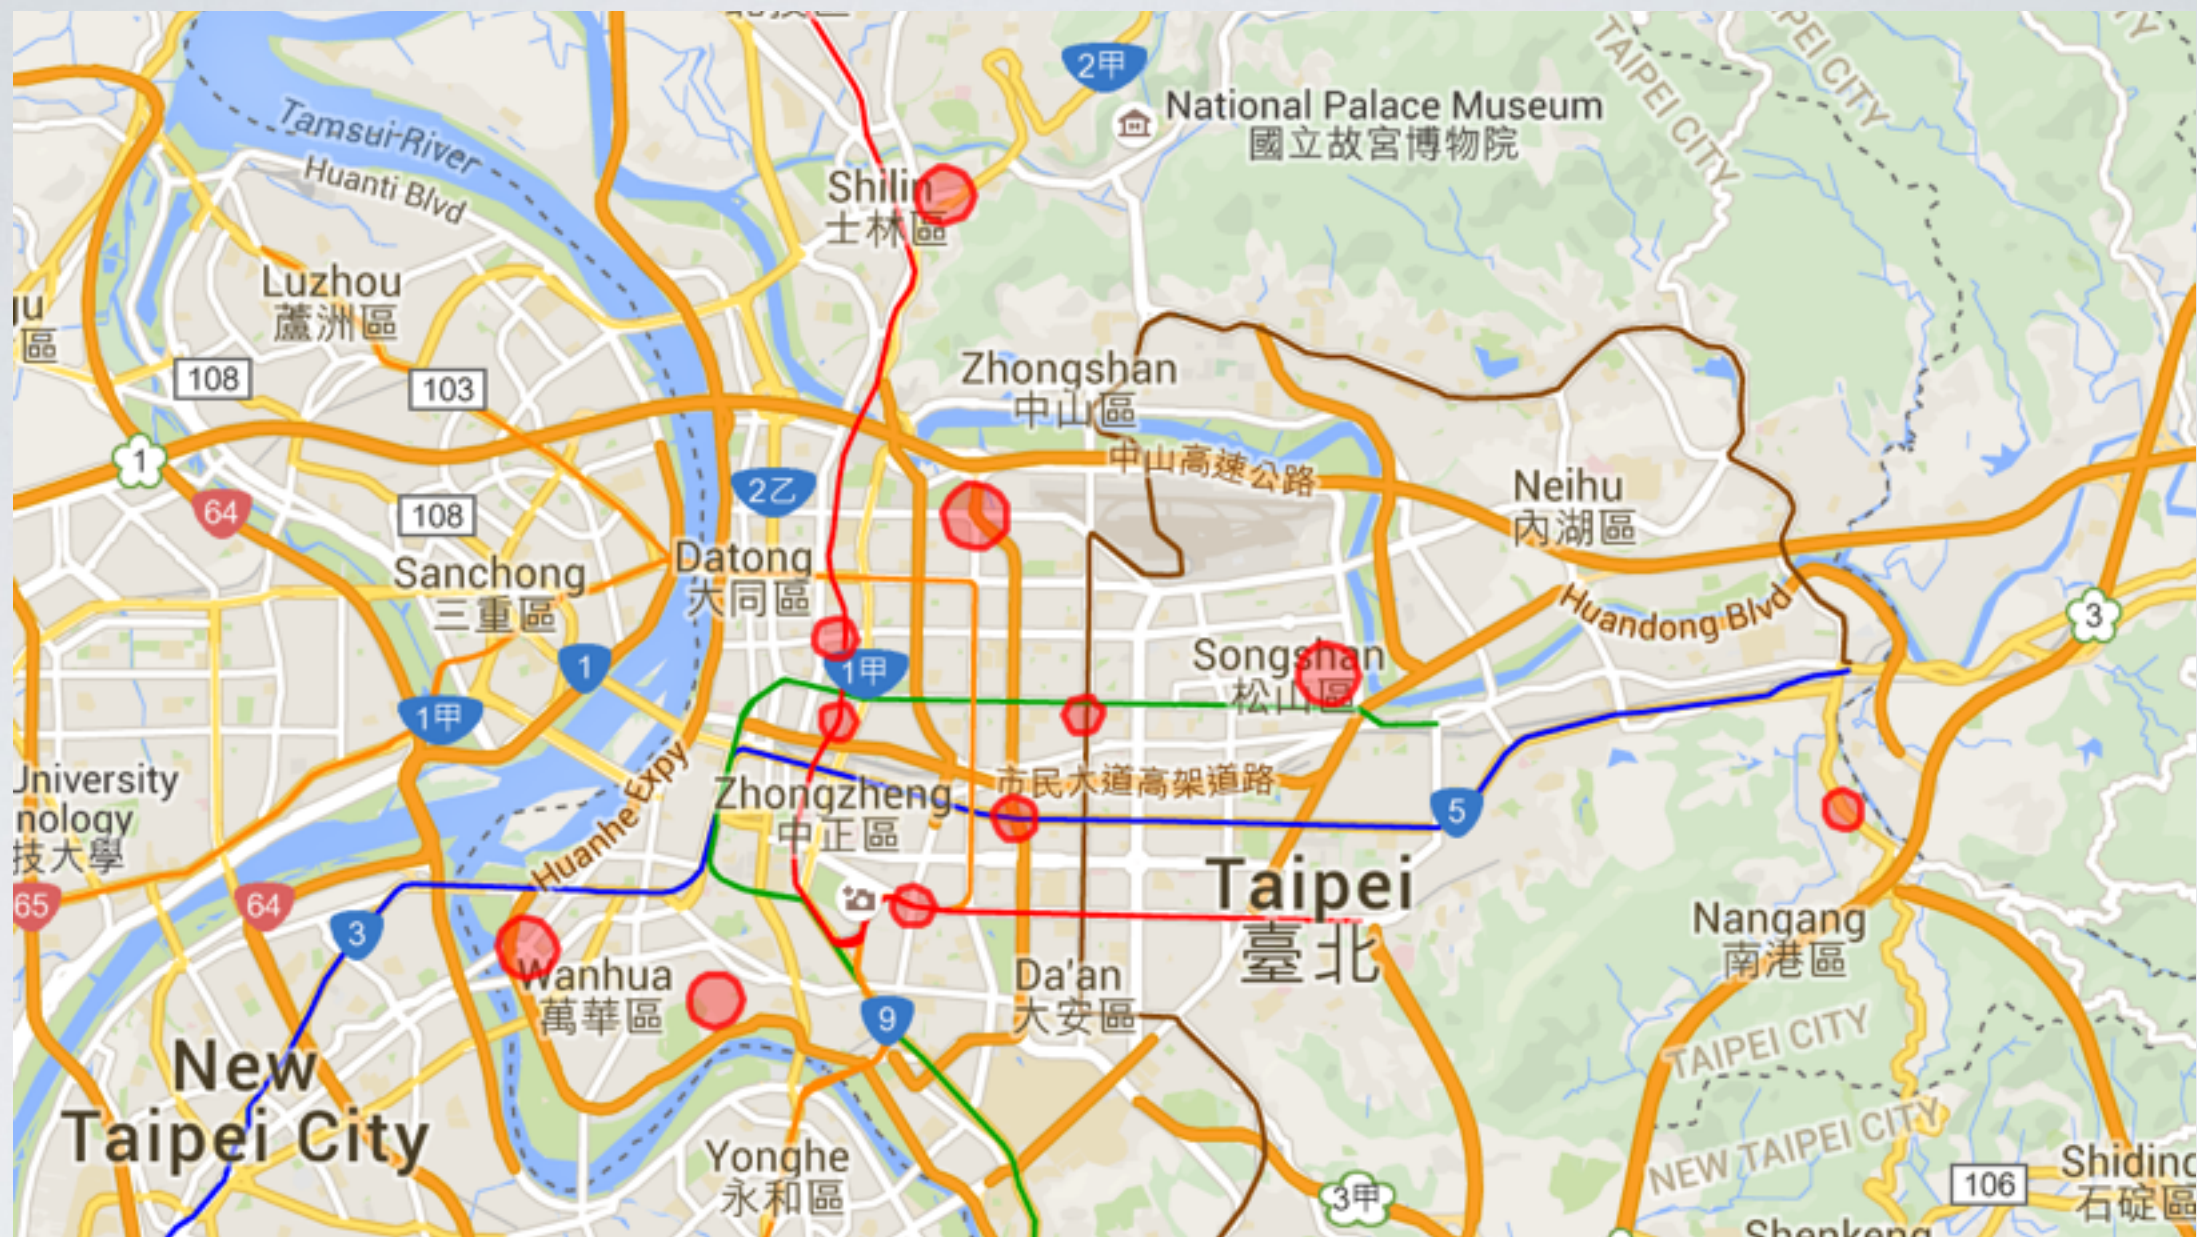

SOLUTION

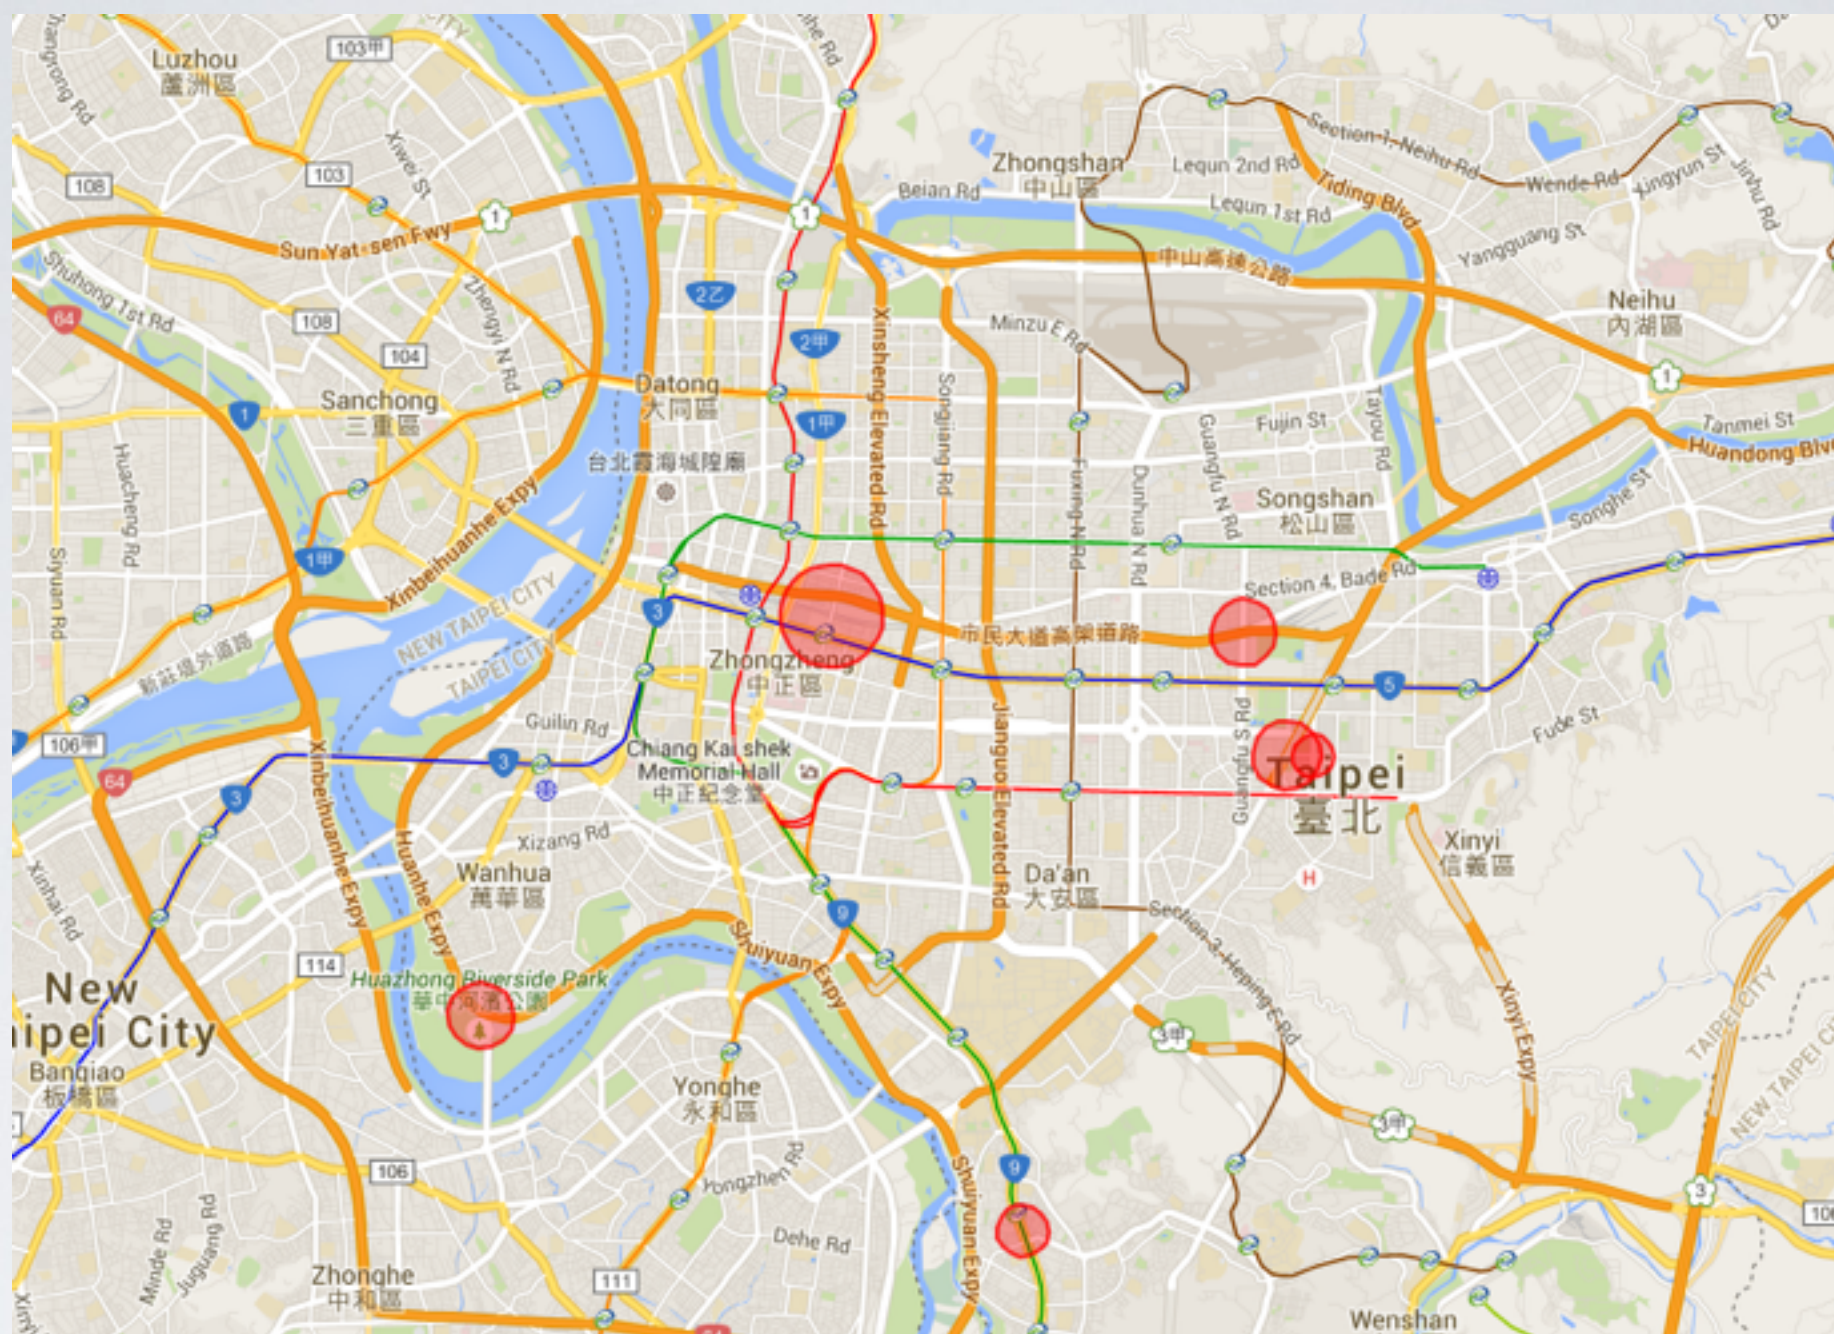

$$\begin{aligned}
f(S, P) = & \left(\sum_{x=1}^P a(Occ_{S,x} - Occ_{S,x-1}) - b(OppOcc_{S,x} - OppOcc_{S,x-1}) \right) \\
& + \left(\sum_{x=1}^P c(Spd_{S,x} - Spd_{S,x-1}) - d(OppSpd_{S,x} - OppSpd_{S,x-1}) \right) + e
\end{aligned}$$

訓練數據截止 8月22日 10點
驗證 8月22日 10點20分 天氣數據
與 Foreca 和 AccuWeather 觀測點完全一致

驗證 8月22日 12點30分 左右開始的降雨，數據正確

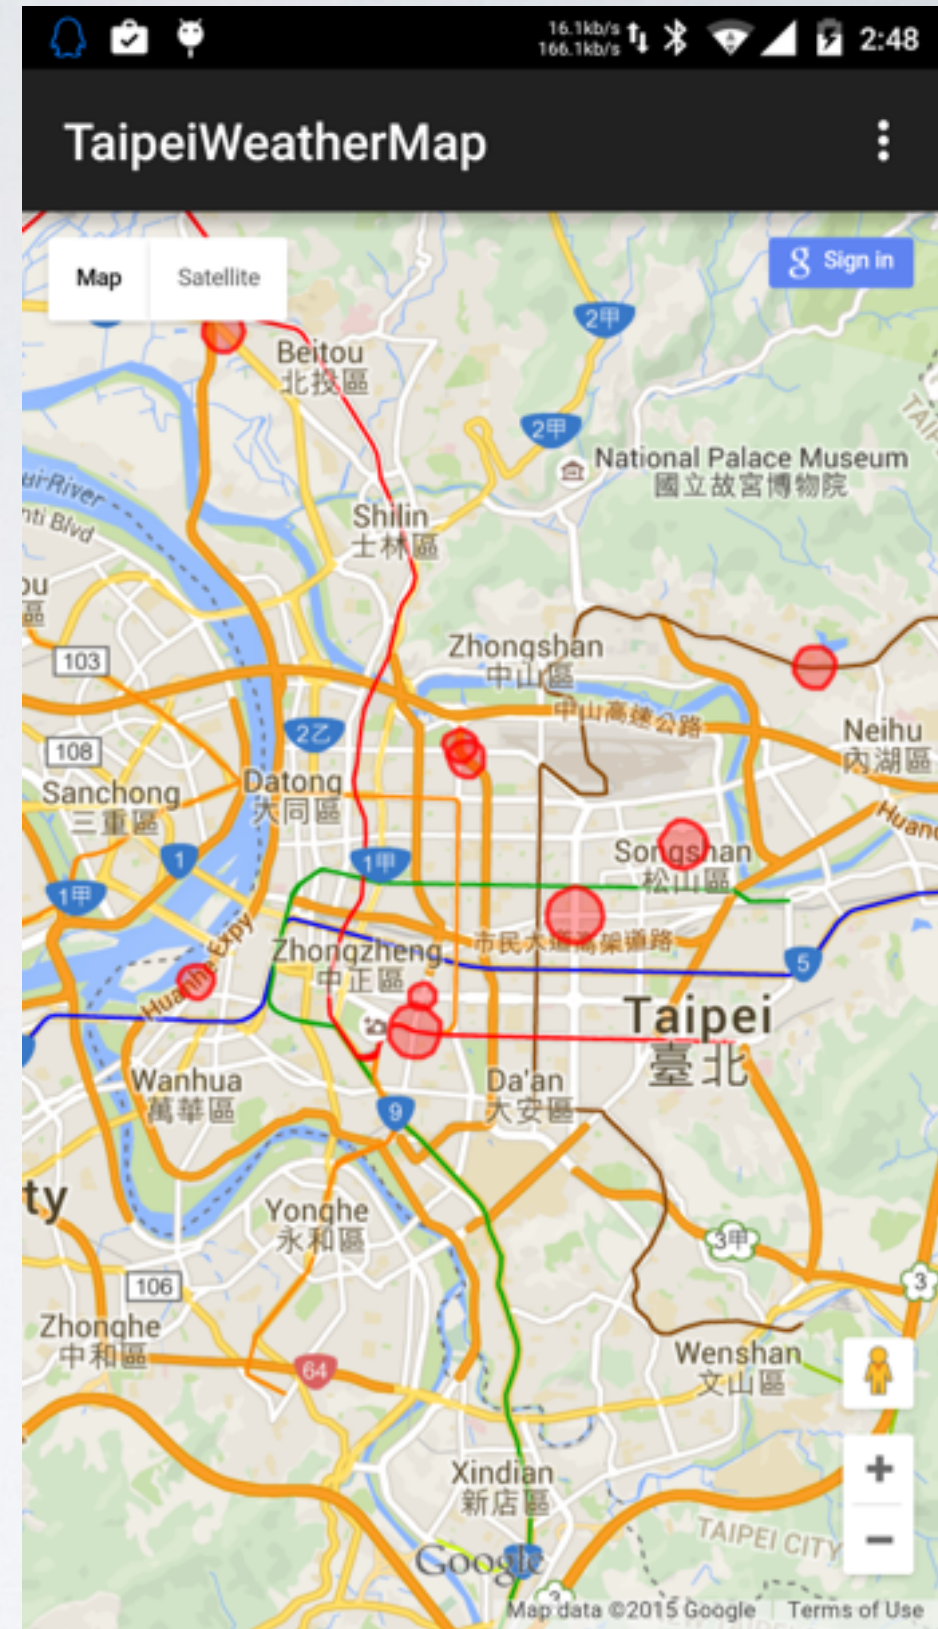

驗證 8月22日 19點06分 降雨位置與
Foreca 紅外氣象數據吻合

APPLICATION

ANDROID 應用

Android App

提供 JSON API 意味無限可能

Providing JSON API,
Means Unlimited Potential

```

PROBLEMS

- 地圖上狹窄路段容易成為處理噪點

Some Narrow Roads May Cause the Noise of Computing

- 對於雨停的判斷存在延遲

Have Delay while Judging Whether the Rain Has Stopped

- 不能判斷雨勢的大小

Cannot Know How Heavy the Rain is
